PROFILE

Full-stack software engineer (React, TypeScript, Node.js, PHP) who ships production systems end to end, from REST APIs and data pipelines to monitoring. Built WinWin Shop as a freelancer: a live client marketplace with a **125-endpoint REST API** and Shopify, payments and OpenAI integrations. At UNILINK, built automation that eliminated **~65% of manual operational tasks** while running observability for **100+ production servers**.

WORK EXPERIENCE

UNILINK
Dec 2024 - Present

NOC Engineer

- Handle incident response and root-cause analysis with DevOps for **100+ production servers** and 10K-100K cloud-native services.
- Built PHP automation for service restarts, health checks and billing workflows that **eliminated ~65% of manual operational tasks**.
- Built monitoring dashboards and alerting across Grafana, Nagios, Netcool and the ELK stack.

IDF (BATZAP 382)
Mar 2022 - Oct 2024

Systems & Communications Technician

- Built PowerShell OS-imaging deployment automation that was **adopted by other IDF units**, replacing manual setup across rollouts.

LS-TECH
Feb 2020 - Nov 2021

Full-Stack Developer

- Delivered **2 client web applications end-to-end** in a 3-person product team (React, TypeScript, Node.js, MongoDB).
- Designed REST APIs and backend services with Docker-based deployments.

PROJECTS

WinWin Shop **Freelance client work | Live | 2026 - Present**

A marketplace where businesses pay content creators for the sales they bring (affiliate marketing + UGC); built and shipped end-to-end as paid freelance client work, **live and in active use**.
Generated a Shopify discount code per creator and tracked affiliate clicks and conversions; captured orders with a **webhook + 5-minute cron hybrid**, so an order still lands when a webhook is missed.
Automated monthly creator payouts with PayPlus card vaulting behind a **125-endpoint REST API**, and added an OpenAI support chatbot served through AWS Lambda.
PHP 8.4, MariaDB, Shopify API, PayPlus, AWS (EC2, S3, Lambda), OpenAI API

Shop Saver

Finds the cheapest nearby grocery basket across Israeli supermarket chains, using geolocation-based basket comparison.
Built a Python + Rust ingestion pipeline for the chains' daily price feeds (**2,500+ items per feed**) with deduplication and retry logic; React + MUI frontend with Hebrew RTL support.
Python, Rust, PostgreSQL, React, MUI, Docker

DevClip

Turns throwaway developer snippets (shell commands, SQL, regexes) into a searchable library: a global hotkey opens a palette that pastes into the app you were in.
Wrote a fuzzy matcher aware of word boundaries and camelCase, ranked by recency and frequency; pure-Rust core with **37 unit tests**, signed Windows and macOS releases via CI.
Rust, Tauri v2, SQLite, TypeScript, GitHub Actions

EDUCATION

B.Sc. in Computer Science (in progress) The Open University of Israel

Practical Engineering Diploma Ort Singalovski — 2019 - 2021

AI First Development Bootcamp abra — Aug 2026

CERTIFICATIONS

Generative AI with Large Language Models DeepLearning.AI — Feb 2026

SKILLS

Languages: TypeScript, JavaScript, Python, PHP, Java, Rust, C/C++, SQL, PowerShell
Backend & APIs: Node.js (Express), Spring Boot, Actix-Web, REST, GraphQL, microservices, OAuth, webhooks, Shopify, OpenAI API
Frontend & Data: React, Next.js, Tailwind CSS, Material-UI, HTML/CSS | PostgreSQL, MySQL/MariaDB, MongoDB, Elasticsearch, SQLite
Cloud & Ops: AWS (EC2, S3, Lambda), Docker, Kubernetes (basic), GitHub Actions CI/CD, Linux, Git, Grafana, Nagios, Netcool, ELK
AI Tooling: Claude Code & LLM coding assistants, agents & sub-agents, MCP, hooks, skills, tool-calling, RAG, prompt engineering, SDD, TDD
Spoken: Hebrew and Russian (native), English (fluent)
